

Assembly Instructions – Split Bed Base

What's in the bag

- 2 bed-base halves
- Head-end connector, Foot-end connector
- Bolts and Bed Legs

1. Set up the two halves

Place both halves in the room where the bed will sit. Stand them upright and position them side-by-side with the inside edges facing each other.

Keep the bases as per the LHS & RHS sticker in case if it's Super King.

2. Join the head end

Slide the one white connector across both halves at the top. Align the holes and tighten the connector where the bed legs attach underneath, joining the top ends securely.

3. Join the foot end

Attach the **other white connector** at the bottom of both halves. Line up the holes and tighten until the base feels firm and stable.

4. Add centre legs and side legs

Screw the centre legs and all the other side legs into the pre-drilled holes underneath. Adjust them so they touch the floor evenly for extra support.

5. Final check

Move the base into its final position. Make sure both halves are straight, level, and sitting tightly together. Place your mattress on top and you're done.

Care Tips

- Lift the base when moving it—don't drag.
- Re-tighten bolts every few months.
- Use on a flat, even floor for best support.
